TEAM CIPHER / ROUND 2 PROJECT UPDATE

BrandGate

Brand compliance, with human review at the center.

From ad copy to grounded findings, reviewed decisions, and an audit trail.

Marketing claims need evidence

A confident line can still be wrong, expired, or off-brand.

01

Claim not registered

A strong claim needs an approved source.

02

Offer is out of date

Validity dates change; copy can lag.

03

Tone breaks the guide

Small wording choices can change brand fit.

Illustrative examples; the demo data is fictional.

A short path from draft to decision

1
Submit
Paste ad copy

→

2
Analyze
Run deterministic checks

→

3
Review
Inspect spans and sources

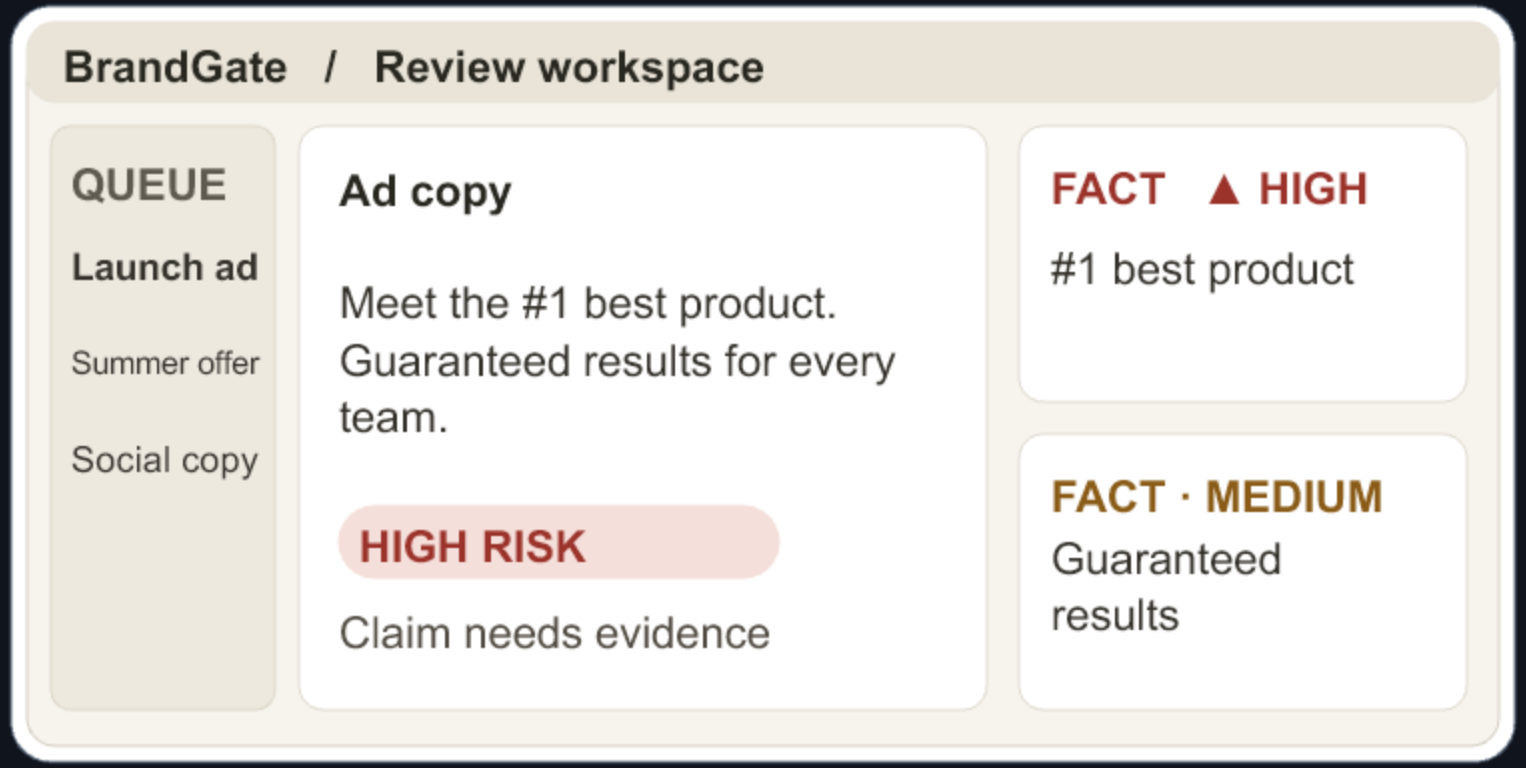

→

4
Approve
Resolve findings; audit actions

Human reviewers choose Accept, Edit, or Dismiss. Nothing is auto-applied.

The current product is a working local prototype

Landing → sample ad → review workspace → audit

Included now

- ✓ Role switcher for the demo
- ✓ Sample: six findings
- ✓ Source-linked review controls
- ✓ Brand Hub + Privacy

Illustrative workspace mockup; this is a local prototype, not a hosted app.

A small, inspectable runtime

Browser

Vite + JavaScript

→

API

FastAPI + Pydantic

→

Demo store

In-memory data

Not connected in this demo

Supabase / RLS · Gemini or Claude · public hosting

Grounding is checked before a person decides

1–3 Ingest · sanitize · deterministic checks

4–5 Retrieve rules · match Facts Ledger

6–8 Optional model · validate source/span · merge

9 Human review

10 Append-only demo audit

Findings are evidence-linked; decisions stay human

FACT ▲ HIGH Rule match ✓
"#1 best product"

FACT ▲ MEDIUM Ledger match ✓
"10k users"

TONE ▼ LOW Rule match ✓
"guaranteed results"

Reviewer actions

1. Accept a finding
2. Edit a suggestion
3. Dismiss with reason
4. Approve after resolution

Six exact-span sample findings are bundled for the planted ad.

What changed from the Round 1 plan

Kept	Ledger-before-LLM order; source and exact-span grounding.
Added	Saved sample fallback, local cache, measured stage metadata, and review audit UX.
Simplified	Round 2 runs Vite + FastAPI with in-memory demo state.
Deferred	Hosted deployment, live Supabase/RLS, authenticated roles, and live LLM calls.

Verification is local; production remains unverified

Verified locally

- ✓ Frontend unit tests: 20 / 20
- ✓ Playwright flow: 9 / 9
- ✓ Contrast audit: 0 failures
- ✓ Landing, Start, Review, Audit

Still pending

- Public app URL and cold-start smoke
- Persistent database and RLS checks
- Live model integration
- Production performance measurements

Local API timing: sample cache miss p50 1,044 ms; hit p50 1,044 ms. Fixed demo delay dominates; no speedup observed.

Round 3: three substantial improvements

01 **Facts Ledger expiry alerts + CSV/PDF upload**

Validate evidence; require approval before publishing.

02 **Guideline Health**

Use reviewed dismissal reasons to flag unclear rules.

03 **Evaluation Harness**

Version labelled cases; report per-rule metrics and regressions.
